JAMES XIA / FILE REPAIR DEMONSTRATION

A broken EPUB, repaired.

Original two-chapter fictional sample. Created with AI assistance to demonstrate three specific structural repairs; not a past client project.

BEFORE

4

errors / exit code 1

AFTER

0

errors and warnings / exit code 0

Checked locally with W3C EPUBCheck 5.4.0. Actual raw results are included.

WHAT CHANGED

Language metadata

Added the missing English publication-language value.

Reading order

Corrected a reference to the existing second chapter.

Contents link

Replaced a missing file destination with the actual chapter link.

Three introduced defects produced four validator messages. Only the package metadata / reading-order file and navigation file changed. Chapter text and stylesheet remained unchanged.

A SMALL, CHECKABLE DELIVERABLE

For a matching error: agree the scope from the error report or an authorized sample, then deliver the corrected EPUB, a change list and actual before-and-after validation results.

Reader appearance, retailer acceptance and accessibility were not tested. A validator pass does not guarantee any of those outcomes.
